Water Weather Station Group
CSCI Senior Capstone 1, Spring 2019
Western Washington University

Dr. Clauson,

Work for completing the Scope and Vision of the Water Weather Station was divided up such that each member had one of the four main sections to complete. Scylla VanZwol completed the business requirements section. Ryan Lingg created and formatted the document, completed the vision of the solution, and wrote the cover letter. Kristopher Stewart completed the scope and limitations section. Melody Grappo completed the business context section. We believe that the contents of this Vision and Scope contain a complete understanding of the direction we should take the project such that substantial and meaningful contributions will be made. This belief is based on meetings with both the customer contact as well as the previous Water Weather Station group.

Best Regards,

CSCI 491 Water Weather Station Group
